Supervisor meeting
Wednesday, 16th of November 2016

Paper

- Methods Section - We will write our modeling and our control approach in methods.

- Results Section - We will have simulation results in the draft and real and simulation results in the final paper.

Discussion about requirements

- Normally you would only have functional requirements and overshoot or rise time is not important. Unless a specific requirement is important in the product. It is maybe not the best idea in our case as we are also doing the model and building the platform.

Exam Date

- We will set a date when the censor is known. Probably next Wednesday.

Next Supervisor Meeting

Wednesday, 23rd of November at 10:00
